PROFESSIONAL SUMMARY

Results-driven Al Engineer with 4 years of hands-on experience designing, building, and deploying intelligent systems across LLM engineering, agentic AI, computer vision, NLP, and voice AI. Adapt at taking AI products from research and prototyping to production deployment on scalable cloud infrastructure(AWS,GCP, Azure).Experienced in building real-Time AI powered systems, as well as finetuning and prompting large language models for domain-specific applications.
Proficient in vector embeddings and vector databases(ChromaDB , FAISS) for building production-grade RAG pipelines.
Skilled in computer vision pipelines using YOLO, OpenCV, Mediapipe , and in voice-driven AI systems leveraging RVC , Vosk and Edge TTS.
Delivered client-facing AI products including a real-time voice cloning pipeline(BENTLEY 1) and a multilingual speech translation system supporting four Nigerian Languages(AIN).
Proven ability to ship end-to-end solutions independently that solves real-world problems.

EDUCATION

Data Science Program At Aptech
Completed a Data Science program at Aptech in 2022,covering Python, c++, and Data science fundamentals.

BSc, Computer Science
University of Calabar
2022 – 2026

AI & Machine Learning
MASSACHUSETTS INSTITUTE OF TECHNOLOGY
08/2024 – 03/2025
I completed a self-directed AI & Machine learning study program at MIT OpenCourseWare.

EXPERIENCE

Full-Time AI Engineer
Codesphere
10/2024 – 02/2025
I got hired by Codesphere to work as a Full-Time AI Engineer.

AI Engineer internship
bigstack
07/2025 – 09/2025
Worked as an AI Engineer intern at bigstack from march 2023-august 2023.

AI Engineer
Gao tek
08/2025 – 03/2026
I got hired on contract of 4months with Gao tek, i was hired as to work with Goa tek as a contract AI Engineer from December 2025 to march 2026.

PROJECTS

QUANTUM
Engineered a fully AI powered voice assistant like SIRI & ALEXA, combining speech recognition and NLP, capable of executing voice commands with zero cloud dependency, reducing latency and ensuring privacy-first operation.

BENTLEYI
Delivered a production real-time voice cloning pipeline using RVC, integrated into a live OBS streaming workflow via custom API, i shipped it to a paying client with zero downtime requirements.

ALIEN1
Designed and deployed a full edge AI loop on Raspberry Pi 5,processing voice commands onboard, executing GPIO motor control, and returning audio feedback Via Bluetooth with nocloud dependency.

Skills & Frameworks

- Python Programming
- C++
- NLPs
- Model Shipping & Deployment
- Generative AI GANs
- RAG Systems
- Deep Learning
- RNÑs
- CNNs
- Vector Embeddings/Databases
- Transformers
- Cloud computing(AWS)
- API INTERGRATION
- LLM & Agentic Frameworks

ACHIEVEMENTS & RECOGNITION

3rd Place Google Hackathon
01/12/2022

Promoted from intern to full-time AI Engineer at Big Stack Technologizs

Deployed Quantum1

Deployed AIN version 1

SATURN
Engineered a RAG system chatbot with memory context using a JSON to store history, user_personalization, User_name , Chatbot_name.
It generate an output by using a LLM(OpenAI).

AIN
Fine-tuned NLLB-200 on 27K Igbo-English pairs, improving BLEU from 14 to 28.86, enabling real-time speech translation across 4 Nigerian languages via FastApi.

AVES (AI VOICE Sales Engine)
Engineered a 7-state FSM voice sales engine with two layer intent detection and objection handling ,integrated with Vapi, Twilio, and Google Calendar for end-to-end appointment automation .

AssetOracle AI Engine
Delivered a production AI Asset verification system, with document verification and investment scoring for real-world asset tokenization, using Llama Guard for safety guardrails, which i shipped for a hackathon.
Github link: https://github.com/Asset-Oracle/con-ai-engine)

FACIAL
Built a computer vision security system using facial recognition to enforce access control in real-time, rejecting unauthorized entries with OpenCV based face detection pipeline.

Githublink:(https://github.com/Alien-dev-ai/Facial-recognition)

CURSOR
Engineered a real-time hand-tracking cursor controller using OpenCV and Numpy, mapping hand movement to on-screen cursor position with frame-level synchronization, no hardware peripheral required.
Github link: (https://github.com/Alien-dev-ai/Cursor)
